

ON-SITE DIAGNOSTIC TESTING

Vascular and Ultrasound Testing Made Easy

YOUR CURRENT TESTING MODEL

Patient Requires Diagnostic Testing

Whether it be vascular ultrasounds or echocardiograms, your patients are in need.

Patient Referred to Offsite Facility

Patients' diagnostic tests are scheduled at an offsite hospital or testing center.

Patient Travels Offsite for Testing

Patients must deal with an unfamiliar site, additional paperwork and new staff.

Testing Center Receives Revenue

All revenue from patient testing goes to the hospital or testing center.

A BETTER WAY TO TEST FOR YOU AND YOUR PATIENTS

Patient Requires Diagnostic Test

Whether it be vascular ultrasounds or echocardiograms, your patients are in need.

Patient Schedules Testing in YOUR Office

A licensed technologist will travel to your office to perform diagnostic tests for your patients.

Patient Returns to YOUR Office

Patients receive diagnostic tests at their convenience and where they are comfortable.

Improve Patient Care and Earn Revenue

Your practice focuses on patient care and earns room rental and supervisory fees.

Why You Should Join Our Program

Support Your Practice A patient is more likely to submit to a test at their own physician's office than an unfamiliar place that entails extra paperwork, time spent for insurance verification, and perhaps a higher co-pay.

Bolster Patient Confidence Nothing gives patients more confidence than knowing their diagnosis and treatment plans are based on high quality, state-of-the-art diagnostic testing.

Provide Quality Testing Certified technologists come to your office and administer tests using the latest technology. Board certified cardiologists and radiologists, who specialize in interpreting test results, prepare and report their findings to you.

Grow Practice Revenue Your office receives personal service compensation for every hour we test in your office, as well as monthly rental revenue for the use of your facility.

Assess Patient Progress You are able to order on-site diagnostic tests according to your direction to help you decide whether additional treatment is necessary.

Some of the Tests Performed

- Transthoracic Echocardiogram
- Carotid Artery Duplex
- Peripheral Artery and Vein Ultrasound
- Abdominal Aorta and Renal Ultrasound
- Abdominal Organ Ultrasound
- Ankle-Brachial Index (ABI)

We

- verify your patient's insurance and obtain authorization
- schedule a certified technologist for the testing
- perform necessary diagnostic tests in your office
- take care of billing your patient's insurance

You

- improve patient care and grow practice revenue

Your Patient

- pays any deductible or co-insurance owed for the diagnostic tests performed
